Project Guidelines:

- Choose the project of your interest related to the course work and applications associated with it.
- If you are choosing any particular research paper then it is expected to have an extension of the paper and your significant contribution on top of that paper (very specific). **If you just copy one existing paper and its GitHub repo as project, you will get zero marks.**

Expected Deliverables:

- Item 1: Submit the project report explaining every component of the project. The project report must be written in the form of the research paper using ICLR template:https://www.overleaf.com/latex/templates/template-for-iclr-2025-conference-submission/gqzkdyycxtvt
- Item 2: Make a presentation on the project. You are provided with the PPT template to be followed exactly.
- Item 3: Code file either .py or .ipynb or if you have created **GitHub** repo for the blog.
- Zip three items and submit it.

Note: You can work on some cool papers related to LLMs, and we can help you convert your ideas into research papers. You can contact Instructors and TAs regarding this.
